DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-19, drawn to a method of measuring a person's exhalation carbon dioxide.

Group II, claims 20-23, drawn to determining the concentration of a substance in a person's exhalation breath.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature in Group I pertains to a method and an apparatus for indirectly determining the concentration of a predetermined substance in the blood. The method comprises measuring the concentration of the predetermined substance and of water vapor in the exhaled air from a person. The special technical feature of Group I is the breath being exhaled "freely" in a delimited volume with a predetermined composition. Group II discloses a method for indirectly determining the concentration of a predetermine substance in the blood. The special technical feature of Group II is the method comprises measuring the concentration of the predetermined substance and of

water vapor and the lung temperature (vaporizing temperature of the alveolar gas) in the alveolar air exhaled by a person into a delimited passage.

A telephone call was made to Michele Yoder on April 21, 03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
